AB- PROBLEM TO BE SOLVED: To accurately obtain the probability
distribution of bad debt amounts of a financial institution.
SOLUTION: The probability distribution calculating device for bad
debt amounts comprises a bad debt amount and bankruptcy probability
input device 10 for inputting the loan amounts and bankruptcy
probabilities of respective loan destinations, a characteristic
function calculating device 12 which calculates a characteristic
function according to the loan amounts and bankruptcy
probabilities, a probability distribution calculating device 14 which
calculates a probability distribution from the characteristic
function through Fourier reverse transformation, and a probability
distribution output device 16 which outputs the calculated
probability distribution as a graph on a printer. Consequently, the
probability distribution of bad debt amounts can accurately be
obtained by using a computer. COPYRIGHT: (C)2000,JPO
